California’s Physician Diversion Program recently celebrated its twentieth year. On January 1, 1980 legislation (Section 2340 of the Business and Professions Code) became effective mandating “that the Medical Board of California seek ways and means to identify and rehabilitate physicians and surgeons with impairment due to abuse of dangerous drugs or alcohol, or due to mental illness or physical illness, affecting competency so that physicians and surgeons so afflicted may be treated and returned to the practice of medicine in a manner which will not endanger the public health and safety.”

What is the Diversion Program?
The Diversion Program is a statewide, highly structured, multifaceted, five year monitoring and rehabilitation program. It is administered by the Division of Medical Quality of the Medical Board of California to support and monitor the recovery of physicians who have substance abuse or mental health disorders. Physicians enter the Diversion Program by one of three avenues. First, physicians may self-refer. This is often the result of encouragement by concerned colleagues or family members for the physician to seek help. Second, physicians may be referred by the Enforcement Unit of the Medical Board in lieu of pursuing disciplinary action. Finally, physicians may be directed to participate by the Medical Board as part of a disciplinary order.

Program Staff and Locations
The Diversion Program headquarters is located in Sacramento. The Program Manager, Program Specialists and support staff are in this office.

All participants are assigned to a locally based Case Manager who coordinates their participation, supports their recovery and monitors compliance with their participation agreement.

Most participants attend local, professionally facilitated group meetings. These Diversion groups meet in 16 locations throughout the State.

Success Rate of Participants
To successfully complete the Diversion Program, a participant must be alcohol and drug free for a minimum of three years and have demonstrated a lifestyle that will support ongoing sobriety. In mental health cases, a participant must have been compliant with treatment recommendations and have demonstrated a lifestyle that will maintain well-being.

From the inception of the Diversion Program in 1980 to March 1, 2000, there have been 981 participants. Six hundred sixty-three (663) of these have completed the program successfully. After factoring out physicians who did not complete for reasons unrelated to their disorders, this results in a 74 percent success rate.

Confidentiality
The statutes establishing the Diversion Program require the confidentiality of all participants who enter the program voluntarily. The names of participants who have been ordered into the Diversion Program as part of a disciplinary action are public record.

Diverting Physicians From Discipline
Legislation allows a physician to participate in Diversion, in lieu of discipline, if the violations are related to the self-administration of alcohol or other drugs, and there is no evidence of patient harm. Physicians who are alleged to have violated statutes related to the self-abuse of alcohol or other drugs may have their cases closed if they enter and successfully complete the program. The legislation also allows the Medical Board to continue to investigate and take disciplinary action against a physician who is enrolled in the program for violations unrelated to the substance abuse disorder.

When a physician requests entry into the Diversion Program, staff must check for any Board action against the physician. In instances where there is an open investigation or other related action, approval by the Chief or Deputy Chief of Enforcement is required for physicians to participate in the program.

Self-Referrals
Approximately 58 percent of the physicians who are currently participating in the Diversion Program are self-referred and do not have any Board action against them. These physicians often request entry into the program at the urging of a hospital, colleague, or family member. By encouraging substance abusing physicians to enter the Diversion Program prior to complaints being filed, public protection is enhanced and these physicians are provided an opportunity for rehabilitation.

Self-referrals receive the same level of monitoring and care as physicians who have been referred by the Medical Board.

Costs and Fees
The costs associated with the administration of the Diversion Program were approximately $806,347 in the 1998-1999 fiscal year. These administrative costs are funded by the Medical Board through physician licensure fees and renewals.

Participants are responsible for any treatment and recovery related expenses such as hospitalization, drug testing, group meetings, individual therapy, evaluations, personal physician care, etc.
However, no licensed physician is denied participation in the program because of an inability to pay. Diversion Program staff often can assist in finding treatment resources for a physician who truly cannot pay.

**Monitoring Physicians**

Participants are closely monitored while in the Diversion Program. A wide variety of monitoring components is used in order to ensure patient safety and provide strong support for the physician’s recovery. Included among those monitoring components are: A five-year Diversion Agreement; Diversion Evaluation Committees; Group Facilitators; Case Managers; and drug testing. A comprehensive list of monitoring components can be found below.

### Diversion Agreements

Each physician signs a Diversion Agreement that contains the specific provisions that he/she must follow while in the program. The agreement is tailored to each individual. However, in general, most physicians enter inpatient treatment programs, attend two Diversion group meetings and a minimum of three 12-Step meetings each week, submit to random drug tests at least twice per month, have hospital and work site monitors, agree not to practice medicine if requested, and agree to remain in the program for five years.

### Diversion Evaluation Committees

The Diversion Program utilizes evaluation committees referred to as the Diversion Evaluation Committees (DEC) to determine appropriateness for participation, terms of participation and successful completion or termination from the program. There are two DECs serving Northern California and three DECs serving Southern California. Each committee consists of three physicians, including at least one psychiatrist, and two public members. All are appointed by the Medical Board. These experts have extensive experience in the treatment and recovery of substance abuse disorders and mental illness. DEC members also provide consultation to Diversion Program staff regarding participants.

### Group Facilitators

There are 13 Group Facilitators with meetings in 16 locations throughout the State. These professionals are licensed psychologists, therapists or certified drug and alcohol counselors who facilitate twice weekly Diversion group meetings for program participants.

The Diversion Group Facilitator is responsible for groups that may range in size from 6 to 12 participants. The number of groups each facilitator manages varies depending on the number of participants in the area. A facilitator may have only one group or, in some areas, may facilitate as many as five.

Facilitators are paid directly by participants. In order to keep group costs as affordable as possible, meeting fees are, on average, lower than the fee charged by most private therapists statewide. Currently, each participant pays the facilitator $235 per month for two meetings per week or $165 per month for one meeting per week. This fee also covers the cost of the facilitator participating in consultations, report writing and attendance at DEC meetings.

### Case Managers

The role of the Case Managers is to ensure that the participants who are assigned to them comply with the provisions of their Diversion Agreements and are solidly in the recovery process. The Case Manager has direct contact with each participant every 4-8 weeks. The Case Manager also coordinates information from all monitoring and treatment sources. When appropriate, the Case Manager consults with the participant’s assigned DEC Case Consultant. The Case Manager may also refer the participant to the full DEC for reevaluation.

### Drug Testing

A minimum of two body fluid specimens are collected each month for drug testing. More frequent samples are collected if there is concern about a participant’s potential use of alcohol or other drugs.

The customized drug screening includes twenty-two screens per test, and detects the drugs commonly used by physicians. Some of the confirmation screens include many subcategories. For example, the screen for benzodiazepines detects a dozen different benzodiazepines. When a participant is suspected of using other drugs not included in the screens, additional tests are ordered.

The current cost of testing specimens by the forensic toxicology laboratory is $30 per test, including confirmations. The collection fee is an additional $15.

---

**Help Your Colleague By Making A Confidential Referral**

If you are concerned about a fellow physician who you think might be abusing alcohol or other drugs or might be mentally ill, you can get assistance by calling the Medical Board’s Physician Diversion Program.

Your referral may save a physician’s life and can help ensure that the public is being protected. All calls are confidential.

What Are the Warning Signs of a Physician with an Alcohol or Drug Problem?
Physicians who are chemically dependent do well at hiding their alcohol or other drug addiction problems, and colleagues often don’t recognize the signs of chemical dependency. Some of the signs that frequently indicate an addiction problem are:

**Personal**
- Deteriorating personal hygiene and dressing habits
- Multiple physical complaints
  - Frequent E.R. visits
  - Frequent accidents and hospitalizations
- Personality and behavioral changes
- Inappropriate tremulousness and/or sweating
- Many prescriptions for self and family
- Emotional crises
- Irritable and short-tempered behavior

**Home and family**
- Behavior excused by family and friends
- Making drinking activities a priority
- Fights, arguments, violent outbursts
- Sexual problems: impotence, extramarital affairs
- Withdrawal from family and fragmentation of family
- Neglecting children: abnormal, illegal, antisocial actions of children, including alcohol and drug abuse
- Financial crises
- Separation or divorce
- Unexplained absences from home

**Friends and community**
- Personal isolation
- Embarrassing behavior
- Drunk driving arrest(s)
- Legal problems
- Neglect of social commitments
- Unpredictable behavior, such as inappropriate spending

**Office**
- Workaholism
- Disorganized schedule
- Unreasonable behavior
- Inaccessibility to patients and staff
- Frequent office absences
- Decreased workload and tolerance
- Excessive drug use—prescriptions and supplies
- Excessive ordering of drug supplies
- Frequent complaints by patients to staff regarding physician’s behavior—altercations with patients
- Prolonged lunch breaks
- Alcohol on breath

**Hospital**
- Often late, absent or ill
- Decreased work/chart performance
- Inappropriate ordering
- Unavailable for verbal orders at night
- Slurred or incoherent speech over phone
- Subject of hospital gossip regarding behavior
- Unavailable for discussions
- Heavy drinking at staff functions
- Altercations with hospital personnel
- Rounds at inappropriate times
- Negative patient feedback

**Other professional problems**
- Frequent job changes or relocation
- Unusual medical history
- Vague letters of reference
- Inappropriate qualifications
- Deteriorating relationship with patients and staff (hospital and office), deteriorating professional performance, increasing malpractice incidents
One Physician’s Recovery From Drug Addiction

by
JoEllen V., M.D.

I was born in 1955 in Cincinnati, Ohio. My father is a family practitioner and my mother is a registered nurse. I was to become the oldest of nine children. Despite an early appreciation and strength in taking on necessary responsibilities for a large family as well as doing well in school, my emotional and social maturity lagged. I was always large for my age and this along with my shyness led to a lot of teasing in grade school resulting in poor self esteem. I learned very early to suppress my depression and loneliness and hide from my feelings by earning recognition and praise through busy work at home and high marks in school. I often justified my lack of involvement with extracurricular activities by excusing myself due to duties required at home. I carried this attitude into adulthood remaining very shy with poor social skills. I had a few good friends but learned to keep relationships at a distance where I felt safe and most comfortable.

During my college years while studying pre-med and nursing as possible future professions I began using amphetamines. I never thought of diet pills as harmful or habitual; they curbed my appetite and allowed me to study for longer periods of time which to me equated with better grades. In 1976 during my third year of college I met an enraging man who showed me incredible interest. Although my family protested our relationship we were engaged a year later and went our separate ways, he to University of Michigan to study law and I to Indiana University to study medicine. Throughout med school and law school I continued to rely on diet pills as a solution to continue the incredible studying required. Somehow the loneliness and stress of school was numbed by the affect of the drug. I do remember running out of the pills on a few occasions and feeling a little sick, however I never consciously considered addiction and withdrawal as possible issues.

Our three-year engagement was mostly a phone relationship with few visits allowed due to our busy schedules but despite ongoing criticism by my family we were married in 1980, two weeks after my husband completed law school. We moved the same day to San Francisco, California where my husband immediately began studying for the Bar exam and I was left to find my way around the city alone. Soon thereafter I began my last year of medical school at UCSF not knowing anyone there and feeling isolated from friends and family. When my husband was not studying for his exam nor working feverishly in the busy law office where he had been hired, we attended social functions with his new friends. It wasn’t long after our marriage that he began making negative comments on my hair, my dress, my weight, my lack of conversation. I was suddenly hearing from the man who supposedly loved me that I didn’t fit in, the same belief I had always kept to myself and which caused me a great deal of pain and unhappiness. I no longer had access to amphetamines which helped numb these feelings. Because my family had objected to the marriage I didn’t tell them that I was unhappy and had made a mistake. Divorce was never considered due to my religious upbringing. I simply hoped and prayed that somehow things would get better.

In 1981 I graduated from medical school. My husband did not attend the ceremony; he was too busy. A month later I started my three-year postgraduate training in internal medicine in San Francisco. Early in my internship year I suspected that my husband was having an affair. When confronted he completely denied any involvement however there was ongoing activity to make me worried. One night after getting home from the hospital my husband offered me a line of cocaine. I had never seen him use drugs nor alcohol to excess. Still very naive to substance use I snorted that line and immediately felt relief, comfort and peace, the feelings that I had felt and missed from amphetamines. With ongoing use the pain and unhappiness of not satisfying my husband seemed to not matter anymore.

It was not long before occasional use led to regular cocaine snorting binges. When our noses could not take any more abuse we found a new route, rocking and smoking cocaine. Once very responsible, we both began making excuses for our absenteeism for work, social and family gatherings. In 1984 I finished my residency program and began working in an urgent care clinic. We both were making a lot of money but most was being spent on cocaine. In order to function we both also became addicted to downers. In 1995 my husband was asked to resign from his position in the law firm and in 1996 he was disbarred for illegal behavior all secondary to the destructive nature of drugs and addiction. My own erratic behavior led to frequent job changes. The depressive withdrawals from cocaine led to frequent verbal and physical abuses and fear was often my motivating force to work, buy drugs and write excessive prescriptions.

In 1996 I suffered a grand mal seizure from a benzodiazepine withdrawal and was taken to an emergency room in San Francisco. There for the first time I heard the suggestion by the attending to self refer to the California Medical Board Diversion Program. I was given the phone number and party to contact however I did not follow through. Instead my husband and I tried a geographical move to Los Angeles only to find it just as easy to score drugs there. After six months we moved back to San Francisco now beginning our lives living in hotels and only those belongings that we could carry. Long gone were the fancy addresses, clothes, jewelry, and cars. Now it was all about survival in an empty, drug crazed world. Although I had been warned by the Medical Board about my behavior and potential consequences even their threats did not stop me. I would frequently escape from the existence with white lab coat and stethoscope only to return to the nightmare. In December of 1989 however I was informed that my medical license was revoked; I stayed
in bed that day not even showing up for my hearing.

Over the next three years I would spend over six months in jail and face 27 felony convictions for prescription writing, narcotic possessions and narcotic sales. Despite the fact that I was on felony probation with urine monitoring I continued to use. By this time my husband and I were living a day to day existence in the seedy Tenderloin district of downtown San Francisco often pushing a shopping cart of our belongings, standing in food lines and selling drugs in order to survive one more night in another dark depressing Tenderloin hotel room with hopefully some crack cocaine to help numb the despair, guilt and shame. My family tried desperately on many occasions to rescue me from this life but I could see no way out of the ever deepening hole which I had created and that held me captive.

In July of 1992, I suddenly faced this existence alone after my husband was arrested. With the threat of prison time I took the suggestions of my probation officer and entered treatment. I remember literally walking out of the Tenderloin district with a bag of possessions over my shoulder and walking to the program. There I began to face my many demons and slowly heal. I was reunited with my family and learned how to face my problems without drugs. After a year in treatment I even began working for the program as an assistant in the medical department gradually advancing my way up as manager. After two years in treatment I graduated from the program in 1994, divorced my husband who was unfortunately still involved in the drug lifestyle and, thanks to the process of recovery, began thinking about my future.

Despite being quite happy with my life as it existed, I often dreamed of practicing medicine again. With the support of my family and many friends I had made in recovery I undertook the challenge. In January 1998 I was granted re-licensure of my California medical license. One of the terms of my probation was to be evaluated by the California Medical Board Division Program and in October of 1998 was accepted into their program. With the incredible support of this group as well as other aspects of my program including AA, my other friends in recovery, my ongoing attachment with my treatment center, my family and the love of my fiancée, I have faced many of my fears. I am now job searching for a position back in primary care medicine.

Thanks to the recovery process I am happier now than ever before. The road back has not always been an easy one, however, I cannot imagine a more fulfilling experience. Recovery has truly transformed my life. I am not proud of my past but am extremely grateful and humbled by life’s experiences and look forward to ongoing growth, challenge and acceptance.

### Prevalence of Alcoholism and Drug Addiction

Physicians are as susceptible to alcohol addiction as the general population and may be more vulnerable to other drug addiction because of access to and familiarity with addictive, mood altering drugs. The drugs most frequently abused by physicians seem to be proportionate to the availability and familiarity of a particular drug in a treatment or social setting. As in the general population, the drug most frequently abused by physicians is alcohol.

Because the populations of those abusing alcohol and other drugs often overlap, and because of the illegality of drug abuse, it is difficult to derive a meaningful prevalence rate for substance-related disorders. However, many believe the total percentage of persons who may abuse alcohol or drugs during their lifetimes exceeds 15 percent. Additionally, those with expertise in the substance abuse treatment and recovery field who work with health care professionals estimate the lifetime risk for developing a problem of abuse among health professionals may be as high as 18 percent.
Physician Substance Abuse Persists

To assess what has been accomplished in California to address the problem among physicians, we can examine the number of physicians in California who have been identified since 1980 for addiction problems and those who are currently being treated. About 1,800 physicians have contacted the Diversion Program since 1980. An informal study in 1990 leads us to believe that there are at least another 1,800 physicians who have sought recovery outside the Diversion Program. Therefore, there are probably at least 3,600 physicians who have received treatment or been identified since 1980 out of the estimated 14,700 (18 percent of 81,762 physicians with valid medical licenses in California) who may abuse alcohol or drugs during their lifetime.

Dealing With An Alcohol or Drug Problem?

Current law does not require a physician to report another physician suspected of drug abuse. However, the principles of medical ethics and current opinion of the American Medical Association Council on Ethical and Judicial Affairs address this issue. They require physicians to report a peer who is impaired, or has a behavioral problem that may adversely affect his or her patients or practice of medicine, to a hospital well-being committee or hospital administrator, or to an external physician health program such as the Diversion Program.

Keep in mind the need for a long-term monitoring program. The experience of the Diversion Program is that ongoing recovery takes time and is developed over several years.

Some of the options which may be considered are:

1. **If the suspected physician has hospital privileges, a colleague can inform the hospital Well-Being Committee.**

   Each hospital is required by regulation to have a Well-Being Committee to assist physicians who are impaired. This committee’s function is to assist physicians in a rehabilitative way and to provide encouragement for them to seek help. Many Well-Being Committees refer physicians to the Diversion Program for monitoring of their recovery. Diversion Case Managers maintain contact with a hospital monitor and a Well-Being Committee member to let them know how the participant is progressing in the program. The Diversion Program can benefit hospitals by monitoring physicians for them. Referrals to Diversion also demonstrate that the hospital has taken a major step to protect patients.

2. **Call the Diversion Program at (916) 263-2600.**

   Calling the Diversion Program does not result in the filing of a complaint with the Medical Board. Diversion Program staff can contact the physician and attempt to intervene. You can request a return call to learn the outcome of the intervention. You then may decide whether to proceed with a complaint to the Medical Board.

3. **Make a complaint to the Medical Board.**

   To request a complaint form call (800) MED BD CA (633-2322). The complaint can be made anonymously. If there is enough evidence of a violation of the Business and Professions Code, Section 805 report. If the incident does not result in a disciplinary action, and self-abuse is suspected, hospitals are encouraged to tell the physician about the Diversion Program.

4. **Confront the physician about your observations.**

   This may be very difficult for most colleagues and medical staff. Because a major aspect of substance-related disorders is denial, be prepared for the physician to have an explanation for the problem that has been observed and an excuse for his/her use. You may want to talk with a staff person in the Diversion Program about some approaches that can be used and resources that are available. Conversations with Diversion Program staff are confidential.
5. Call the CMA Hotline at (650) 756-7787 in Northern California or (213) 383-2691 in Southern California.

This is a network of local physicians who either have experience dealing with chemically dependent health professionals or who are recovering themselves from a substance-related disorder. These local networks are confidential and independent from the Medical Board or the CMA.

**Protecting the Public and Saving Costs**

Fifty-eight percent (58%) of the physicians currently in the program entered Diversion prior to a complaint being made to the Medical Board or a Medical Practice Act violation having occurred.

This group of self-referred physicians saves the Medical Board up to $29,000 per physician because the Medical Board does not have to pay for an investigation, Attorney General services, an administrative hearing for disciplinary action, and probation monitoring costs.

The Diversion Program also provides greater public protection when a physician enters the Diversion Program prior to or while a complaint is being investigated, because the physician is being monitored and is undergoing treatment.

---

### How Someone Enters the Diversion Program

A physician may enter the Diversion Program by calling the Sacramento office at (916) 263-2600. The physician will be referred to a local Diversion Group Facilitator in his or her area and be asked to start attending Diversion group meetings immediately. The physician will meet with a Diversion Program Case Manager and be scheduled for an evaluation by a Diversion Evaluation Committee. Hospitals or colleagues who request that a physician enter Diversion may get verification that they have done so by having the physician give the Diversion Program permission to inform the hospital or colleague of their application.

### Confidentiality of the Program

Information about a physician’s participation in the Diversion Program is confidential. Physicians who enter the program as self-referrals without a complaint filed against them are unknown to the Enforcement Unit of the Medical Board.
Frequently Asked Questions

What is the Diversion Program?
It is a program administered by the Medical Board of California (MBC) to monitor the recovery of physicians who have an alcohol or other drug addiction or who have a mental disorder.

Who is eligible for the Diversion Program?
Any California licensed physician who has an alcohol or drug addiction or mental disorder, and who is deemed appropriate to enter the program by a Diversion Evaluation Committee, is eligible for the Diversion Program.

Will a physician’s license be affected if he/she is in the Diversion Program?
A physician’s license is not affected as a result of being in the program.

Are some physicians required by MBC to be in Diversion?
About 21 percent of current Diversion participants are required to be in the program by MBC. Another 21 percent are participating in lieu of MBC disciplinary action.

Will the MBC know if a physician is in the program?
The Board does not know a physician is in the Diversion Program if no complaint has been filed. However, if a physician is unsuccessfully terminated from the program and is determined to be unsafe to practice medicine, the Board will be notified of that physician’s unsuccessful completion of the program.

How does a physician apply to the Diversion Program?
The process begins when the physician calls the Diversion Office in Sacramento at (916) 263-2600. The physician is requested to attend local physician group meetings. An intake interview is conducted and a meeting with the Diversion Evaluation Committee is scheduled.

MBC Mission Statement
The mission of the Medical Board of California is to protect consumers through proper licensing of physicians and surgeons and certain allied health professions and through the vigorous, objective enforcement of the Medical Practice Act.
